# Y8 Computing Autumn: Learning Journey

## What are we learning about?
In this unit of work we are going to look at how to use HTML to create our own webpages. We will learn about notepad and TAGS that enable us to add features such as text, images, tables, marquees, colours and links.

## Why are we learning about it?
We are learning about HTML to create webpages because we all use webpages in school, at home, on mobile phones and in the workplace. It may be that you may to create your own webpages in the future.

## What new KNOWLEDGE will I gain?
You will study how to use notepad to write your own HTML using tags to create a script that you can display as your own webpage. This will provide you with the knowledge of how webpages are made and how they can be edited and improved.

## UNIT: HTML

## How does this build on the SKILLS I already have?
This course will develop your computing skills in a new way, but it will also build on any skills you might already have for using the internet, computer software, file extensions and design.

## What new SKILLS will I develop?
You will practice new skills that may be challenging as you have to be precise and careful when using HTML. You will learn how to add text, images, tables, links to other pages and be able to format your page with font sizes and colours. These skills using HTML will be new to most of us.

## How does this build on the KNOWLEDGE I already have?
In a connected world we all understand the importance of using computers. We can create online personas to promote ourselves and share information. Learning HTML will add to your ability to impact the web in a new way.
