Y9 Computing: Learning Journey

What are we learning about?
In this unit of work you will learn how to create a kiosk system using Power point. You will also learn how to use Boolean logic when searching for information online.
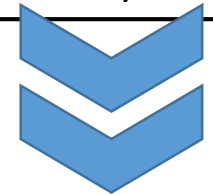

Why are we learning about it?
Being able to search the internet in the most efficient way is important to be able to research well. Being able to use a kiosk system in future education and the workplace is an advantageous skill.

What new KNOWLEDGE will I gain?
You will learn how to use hyperlinks and other features of a kiosk system to create an audience friendly piece work. You will learn how to use Boolean logic to search for the content of your kiosk

UNIT: Kiosk

How does this build on the SKILLS I already have?
This unit builds on skills you already have at being able to search the internet, save files and images and creating interactive presentations.

What new SKILLS will I develop?
Learning how to apply Boolean logic to internet searches will make any future research for all subjects more effective. You will also develop new improved presentation skills.

How does this build on the KNOWLEDGE I already have?
You already know how to use Power point to create a presentation and this unit will build upon this knowledge by allowing you to use more advanced features.
