

HT3 TOPIC: Yr11 Managing Resources

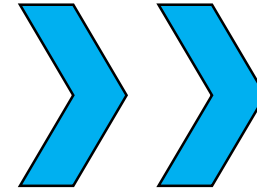

What are we learning about?

You will learn about what are essential resources. You will learn about the inequality in the supply and consumption of resources globally. You will learn about the main issues surrounding food, water and energy in the UK.

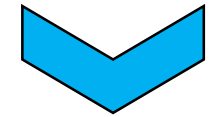

Why are we learning about it?

Resource management is one of the most globally important issues we face in the coming years. With a growing population of nearly 8 billion how can we provide everyone with enough food, clean water and energy to have an acceptable standard of living.

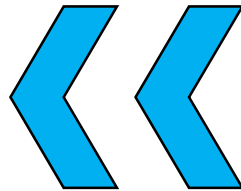

What new KNOWLEDGE will I gain?

You will learn about how our government makes sure that the population has enough resources and how we can move from energy produced by fossil fuels to a more sustainable energy mix including renewable sources.

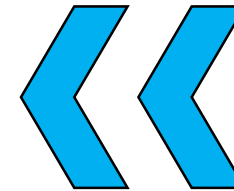

How does this build on the SKILLS I already have?

You will continue to develop your assessing and evaluating skills and being able to express to what extent you agree with different strategies to supply resources to the population.

What new SKILLS will I develop?

In this unit you will develop your skills on how to identify what sustainable development looks like for example moving towards a country that is powered by renewables and not fossil fuels.

How does this build on the KNOWLEDGE I already have?

In Year 8 you learnt about farming and how farming has changed in this unit you will build on that knowledge. In Year 7 when you learnt about climate change you learnt about where our energy comes from.
