

# Y7 Geography HT 6: Learning Journey

## What are we learning about?

In these lessons we will continue learning about population, focusing on how we measure population using census and the issues of over population.

## Why are we learning about it?

The world's population is rapidly increasing and this growth is the main reason for many of the big environmental issues we have now. Climate change, waste management and resource shortages.

## What new KNOWLEDGE will I gain?

You will learn about what a census is, how it is carried out and how the data is used. We will also look at what things are fuelling the population increase and the issues around that.

## **TOPIC: Population**

## How does this build on the SKILLS I already have?

You are already able to give an opinion, and you can use the key terms with accuracy.

## What new SKILLS will I develop?

You will be using population pyramids and population maps. Also thinking about the skills needed when creating a questionnaire.

## How does this build on the KNOWLEDGE I already have?

In HT5, you learned about density and distribution. You'll use this knowledge to build on information about overpopulation.
